Regional Outreach Coordinator Position  
Presented by Beatriz Maldonado

# Mission of Girls Who Code

---

Closing the gender gap in technology by providing  
access to computer science education to communities

Coding Clubs  
College Loops  
Summer Immersion Programs

# As ROCs...

---

As Regional Outreach Coordinators, our main objective was to advance **national access to computer science education**.

Our responsibilities included:

- Managing regional outreach strategies using quantitative data dashboards and trend analyses
- Working collaboratively with other national Regional Outreach Coordinators to address program outreach needs and recruitment approaches
- Delivering presentations and events that reinforced partnerships and expanded equitable program reach

We primarily focused on **strengthening strategic partnerships** with K-12 schools, libraries, nonprofit companies, and community based organizations.

Each partnership was unique and important: ROCs addressed and tailored to **individual partner needs and expectations** for a Girls Who Code club. By doing so, we aimed to fully enhance Girls Who Code club user experiences (for both the partner and the student)

# Success Metrics

---

To evaluate my performance, I:

- Worked collaboratively with senior managers of Community Partnerships and Outreach department
- Met weekly with my senior manager to discuss strategies for establishing partnerships and address any questions or issues
- Met monthly with other ROCs and Outreach managers for comparative data analyses by reviewing the company's previous monthly, seasonal, and annual goals.
- Completed project management and data analysis via digital platforms like the Google Drive App Suite, Tableau, Slack, Trello, and Zoom.
- With such precise organization and collaborative dedication from my team, our managers reflected on our met and upcoming initiatives

# User Experience

---

01.

User-  
centered  
research

02.

Stakeholder  
Engagement

03.

Data-driven  
strategies with  
inclusive service  
design

# Personal Learning Outcomes and Takeaways

---

- Loved the opportunity to make computer science accessible
- Understanding the limited visibility of final club outcomes
  - Aiming to be more involved beyond the initiation of a service
